

# Chubb

## COBAR SAFE

Chubb, the worlds most respected name in physical security, is proud to offer the Chubb Cobar safe range. Suitable for office or home, this safe is a light quality commercial safe offering protection for limited/smaller holdings of cash, valuables and documents. This economically priced safe provides protection against theft and fire protection for paper records. If you require protection against other forms of attack - such as

drilling, explosives or oxy acetylene - your Chubb representative can advise on other models offering increased levels of protection.

As with all Chubb products you receive peace of mind with the knowledge that they are backed by Chubb's nationwide network offering 24 hour service and after sales advice.

## SPECIFICATIONS : Cobar Safe

■ **DOOR** - Overall thickness 85mm. The door plate is of 10mm solid steel, with additional protection over the lock. Boltwork comprises 28mm moving front bolts together with a full height steel dogging bolt at the rear. Lift off adjustable hinges are used. When the door is open it is simple to remove it from the body (where required to reduce the weight during delivery or in a lift) without reducing the security of the safe. Patent closures and door seal are designed to give protection for paper records against fire for up to 45 minutes.

■ **LOCKING** - One three wheel keyless combination lock and one six lever safe key lock. The combination lock can be set for up to 1,000,000 different combinations by the user. Always lock both locks for enhanced security.

■ **BODY** - Overall thickness 65mm, constructed from inner and outer steel enclosing a jointless barrier material anchored to the body plates. One bolt down hole is provided.

■ **FINISH** - A hard wearing and easy cleaning Chubb 'Warm Grey' polyurethane finish is standard. The protective fascia panel, handle and key lock escutcheon are all finished in a dark brown. The combination dial is finished in an easy to read high lustre metallic silver.

■ **FIRE RATING** - Designed to give 45 minutes protection for paper records. Sensitive materials such as stamps, microfilm, diskettes or magnetic media require lower internal temperatures and should be stored in Chubb's range of Diskette/Data cabinets. Contact your nearest Chubb outlet for details.

■ **SERVICE** - For reliable operation, each 12 months the combination lock should be cleaned and adjusted, and other door linkages inspected and cleaned to prevent dust and moisture build up. Contact your nearest Chubb authorised service outlet who will be able to arrange this service.

■ **BURGLARY ALARMS** - It is recommended that you fit as an option a Chubb vibration detector to the safe, connected into your alarm system. Any concerted physical attack will trigger the detector and raise the alarm.

■ **INSURANCE COVER** - The Cobar safe has been designed to protect low cash risks. Some insurance companies have indicated a risk level of up to \$8000.00 depending on circumstances. Please consult with your insurance company to determine the level of risk applicable to their requirements. For increased burglary protection see our leaflets on the Chubb Newcastle, Pacific, Botany and Wentworth safe ranges.
